

Art of Reading Smoke

This one-day class is a must for all first-due Officers. Often, smoke issuing from a building is the only clue available to predict fire behavior and the likelihood of a flashover or rapid fire spread. First-arriving officers, Incident Commanders, and Safety Officers MUST know how to rapidly read smoke - this class explains the reading-smoke process and gives participants lots of practice using actual fire ground video.

- I. Why do we Read Smoke?
- II. The "Advanced" Basics of Reading Smoke
- III. Hostile Fire Events and Warning Signs
- IV. The Four-Step Process
- V. Video Practice

September 2, 2008 (Tuesday)

Renton Fire Training Center

\$125.00

Instructor: Chief David Dodson

Incident Safety Officer

This is a two-day course derived from the book: "Fire Department Incident Safety Officer" (Delmar, 2 edition, due late 2006) and addresses ISO components of NFPA 1521 (2007 - proposed). The course is a realistic, street-applicable approach to performing the functions of the Incident Safety Officer at fires and other working incidents. The class serves as an excellent study tool for those challenging the ISO Certification test for the National Professional Qualifications Board. This class is far more detailed and "street-practical" than the National Fire Academy's two-day ISO field course!

September 3 & 4, 2008 (Wednesday & Thursday)

Renton Fire Training Center

\$200.00

Instructor: Chief David Dodson
